

THESE ARE BLANK JAW DIMENSIONS FOR CUSTOMER USE

Use these dimensions to figure out the diameters and depths of your custom jaws.
 NOTE: All dimensions are in inches.

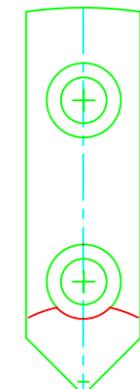

THIS IS AN EXAMPLE OF A CUSTOMER'S REQUESTED DIMENSIONS

In this example, we used a .330 pin in order to move the jaws to a position where his .670" diameter cuts would not intersect with the mounting holes.

FULL-RADIUS CUT

In the Full-Radius Cut example, we used a .330 pin, so the .670 diameter would clean up the entire jaw.

SMALLER DIAMETER PIN INTERRUPTED-RADIUS CUT

If the jaws were closed down smaller than .330, as seen in the bottom drawing, then the .670 diameter would have cut into the mounting hole.
