

CNC Plug-in Relay Information for Centroid Acorn

About the Acorn Plug-and-Play Relay Module

The Plug-and-Play relay module allows CNC-controlled connections to various CNC devices such as VFDs, solenoids, lights, fans, pumps, motors, other larger relays, and contactors in a compact format. The 8-relay module contains eight SPDT (Single Pole Double Throw) high-current relays (10 AMPS at 250 VAC and 10 amps at 30 VDC), which can directly control any device rated at or below the maximum rating of the relays. If higher current devices are required, these relays can then, in turn, control larger relays or contactors to control the higher current device.
